Information on the PZH hygienic certificate for ATM valves

Dear Customer,

We would like to inform you that ATM thermostatic mixing valves (300 and 500 series) manufactured by AFRISO Sp. z o.o. have a current hygienic certificate issued by the Polish National Institute of Public Health - National Institute of Hygiene (NIZP-PZH) with the number B.BK.60110.0584.2022 valid until 10th of June 2025.

The aforementioned PZH hygienic certificate is an official document confirming that the product meets hygienic requirements and is safe for use in the listed application, i.e. domestic hot water and underfloor heating systems. The certification process includes an assessment of the materials used in production and their impact on water quality to ensure that the product does not introduce substances harmful to health into the water.

AFRISO ATM thermostatic valves are made from materials such as brass, stainless steel, EPDM and ABS. Thanks to being approved by the Polish National Institute of Hygiene, ATM valves can be freely used in domestic hot water and underfloor heating installations for effective temperature control.

We encourage you to read the full technical documentation available on our websites.

Sincerely

Krzysztof Mainka
Technical Director
